

Fiber Patch Cord Spec

A fiber Patch Cord is a connector plug installed at both ends of the fiber optic cable to enable optical connection, and a plug at one end is called a tail fiber. Optical Fiber Patch Cord/Cable is similar to coaxial cables, but does not have a mesh shield. The center is the glass core of light propagation.

Features

- Low Insertion Loss
- High Return Loss
- Good Mechanics
- High Stability and Reliability

Application

- FTTH / CATV System
- The Field of Optical Communication
- Optical Transmission System
- Equipment Tester
